Portfolio: abbaszaidi-portfolio.vercel.app

PROFESSIONAL SUMMARY

Software Engineer and 2025 Computer Science graduate specializing in .NET and Python. Experience building enterprise backend modules in X++ and .NET with SQL Server and SSRS, plus machine learning projects in Python for agriculture and medical imaging using TensorFlow, PyTorch and OpenCV.

TECHNICAL SKILLS

Languages: C#, Python, X++, SQL
.NET and Enterprise: .NET, Object-Oriented Design, Service-Layer Architecture, REST API Design, Microsoft Dynamics 365 F&O, SSRS
Machine Learning (Python): TensorFlow, PyTorch, Scikit-learn, OpenCV, CNNs, LSTM, Regression Modeling, Image Classification, Remote Sensing
Databases and Tools: SQL Server (SSMS), Git
Core Concepts: Data Structures and Algorithms, Authentication and Authorization (RBAC)

EXPERIENCE

Software Developer, Dynatuners | Oct 2025 - Mar 2026

- Developed and customized backend modules and business logic for an enterprise ERP system using X++ and .NET.
- Built and maintained SSRS reports that processed and presented business data.
- Wrote and optimized SQL queries against SQL Server (SSMS) to manage and retrieve structured data.
- Completed formal technical training in enterprise software architecture and business systems integration.
- Collaborated with cross-functional teams to deliver scalable, production-ready solutions.

Backend Development Intern | Aug 2025 - Sep 2025

- Built RESTful APIs following service-layer architecture and DTO patterns.
- Implemented authentication and role-based access control (RBAC) for secure multi-user access.
- Contributed to a live codebase using version control and team development workflows.

PROJECTS

InvoicePro: Invoicing and Business Management System (.NET) | 2025

- Built an invoicing system for a distribution business covering products, customers, invoices and a revenue dashboard.
- Live frontend demo: invoicepro-xi.vercel.app

Sugarcane Yield Prediction using Remote Sensing (Python) | 2024 - 2025

- Built LSTM and regression models in Python to predict crop yield from vegetation indices derived from satellite imagery.
- Designed a monitoring dashboard with field maps, NDVI trends and yield predictions.
- Live project: sugarcane-monitoring.netlify.app

Kidney Stone and Tumor Detection using CNN (Python) | 2023

- Built and trained a convolutional neural network in TensorFlow to classify CT and X-ray images.
- Applied image preprocessing and data augmentation with OpenCV to improve model accuracy.

EDUCATION

BS Computer Science, University of Management and Technology, Lahore | 2021 - 2025
CGPA: 3.02 | Coursework: Machine Learning, Data Structures and Algorithms, Object-Oriented Programming, Databases, Computer Vision
Final Year Project: Sugarcane Yield Prediction using Remote Sensing (Python)
